CS 4330: Mobile Application Development  
Spring 2016

CRN: 25832  
Lecture: MW 10:30-11:50 am in CCSB 1.0202  
Website: http://www.cs.utep.edu/cheon/cs4330  
Instructor: Yoonsik Cheon (x-8028, ycheon@utep.edu); office hours: TBA in CCSB 3.0606  
Prerequisite: CS 3331 or instructor’s approval

Description  
This course is targeted for students who want to start writing mobile applications on Android platforms. Android became a formidable mobile operating system, and this course will provide hands-on learning classes on writing Android applications. We will get started with the basics of Android programming by covering the most recent version of Android and understanding its development framework. We will learn both the fundamentals and the nuts and bolts of Android and have an exciting opportunity to write feature-rich Android applications that may be published in the Android market (see Appendix for learning outcomes).

Textbook  
The textbook—Trish Cornez and Richard Cornez, Android Programming Concepts, Johns & Bartlett Learning, 2015—should be available at the UTEP bookstore, and students are expected to acquire a copy for their use in this course, as reading assignments will be taken from the textbook. The following books are not required but recommended.

Electronic books of all the above Android textbooks are available through UTEP library (libraryweb.utep.edu).

Examinations  
There will be one mid-term exam and the final. The mid-term exam will take place during the regular class session and will be 80 minutes in length, and the final exam will take place on the date specified by the university. Makeup exams will be given only when you have unusual circumstances, such as incapacitating illness or presenting a research paper at a conference. If you believe that you have an unusual circumstance that warrants a makeup exam, notify us as soon as possible. If you will be attending a conference or other event, you must make arrangements for a make-up exam in advance. Under any circumstances, you may be required to provide official documentation before a make-up will be administered.

Homework Assignments  
There will be 4 or 5 homework assignments, and most assignments will be programming assignments. Some may be done in pairs while others must be done individually. No late submission will be accepted for homework assignments.

Semester Project  
You should do a semester-long class project. The purpose of the semester project is to apply concepts and techniques learned in this course and develop a more realistic Android application that is feature-rich and may be publishable in the Android market. Sample project topics will be suggested by the instructor or you’ll have a chance
to propose your own project topic. In either way, your project must be approved by the instructor. You are expected to write a project proposal, demo a prototype, submit a final project report, and present the project result. Depending on the complexity, scope, and size of the project, it can be an individual, pair, or team project.

**Grading**

Your grade is independent of anyone else’s grade; that is, we do not grade on a curve. Everyone can get an A in this course. The purpose of grading is not to rank you, but to uphold a standard of quality and to give you feedback. The final letter grade will be based on a combination of quizzes, in-class work, homework assignments, project assignments, exams, and class participation. The approximate percentages are as follows:

- Quizzes and in-class work: 20%
- Homework assignments: 35%
- Project assignments: 20%
- Exams: 25%

There are also up to 5% bonus points for lecture attendance and class participation. To earn this, you must arrive at lecture on time and participate in class discussion in a constructive and prepared manner, e.g., by asking or answering questions that demonstrate that you have read and attempted to understand the material.

The nominal percentage-score-to-letter-grade conversion is as follows:

- 90% or higher: A
- 80-89%: B
- 70-79%: C
- 60-69%: D
- below 60%: F

The instructor reserves the right to adjust these criteria downward, e.g., so that 88% or higher represents an A, based on overall class performance. The criteria will not be adjusted upward, however.

**Attendance**

Lecture attendance is required; you should understand that your success in the course will improve greatly by attending classes regularly. The following is excerpted from the 2015-2016 Undergraduate Catalog.

The student is expected to attend all classes and laboratory sessions. It is the responsibility of the student to inform each instructor of extended absences. When, in the judgment of the instructor, a student has been absent to such a degree as to impair his or her status relative to credit for the course, the instructor can drop the student from the class with a grade of W before the course drop deadline and with a grade of F after the course drop deadline.

**Standards of Conduct**

You are expected to conduct yourself in a professional and courteous manner, as prescribed by the UTEP Standards of Conduct. Graded work (assignments, projects, exams) is to be completed independently and should be unmistakably your own work, although you may discuss your work with others in a general way. You may not represent as your own work material that is transcribed or copied from another source, including persons, books, or Web pages. Instructors are required to—and will—report academic dishonesty and any other violation of the Standards of Conduct to the Dean of Students.

**Disabilities**

If you have a disability and need classroom accommodations, please contact The Center for Accommodations and Support Services (CASS) at 747-5148, or by email to cass@utep.edu, or visit their office located in UTEP Union East, Room 106. For additional information, please visit the CASS website at www.sa.utep.edu/cass.
Course Outline
As shown below, the course will have three phases: boot camp, Android programming, and semester project; refer to the next page for a detailed schedule.

Boot camp: reviews (1 week)
1. UML class diagram
2. Frameworks and GUI programming (handout: Johnson97)
3. Design patterns
4. Unit testing using JUnit
5. Documenting using Javadoc
Assignment: UML, Java applet/dialog

Android Programming (13 weeks)
1. Introduction to Android and Android Studio (Chap 1)
2. Building user interfaces and basic applications (Chap 2)
3. Activities and intents (Chap 3)
4. Fragments, action/tool bar, and menus (Chaps 4)
5. Threads, handlers, and programmatic movement (Chap 6)
6. Touch gestures (Chap 7)
7. Data persistence: shared preferences, file storage, and SQLite (Chap 9)
8. Sensors and camera (Chap 8)
9. Graphics, drawing, and audio (Chap 5)
10. Other topics of interest: networking, content providers, services, location-based services, etc.)
Assignments: Android studio, GUI, activity and intents, multithreading, and networking

Semester Project (2 weeks)
1. Project proposal
2. Prototype demo
3. Final presentation
**Detailed Schedule**

The following table shows a planned schedule for the course. The schedule is subject to change, and an up-to-date schedule will be available from the course website.

<table>
<thead>
<tr>
<th>Dates</th>
<th>Topics</th>
<th>Readings</th>
<th>Assignments</th>
</tr>

</table>

**Important Dates**

- January 18: Martin Luther King, Jr. day (university closed)
- January 19: Classes begin
- February 3: Census day
- March 7-11: Spring break (no class)
- March 16: Exam 1
- March 25: Cesar Chavez birthday - observance (no class)
- March 25: Spring study day (no class)
- April 1: Course drop deadline
- May 6: Dead day
- May 13: Final on Friday at 10:00 am–12:45 pm
CS 4330: Mobile Application Development
Learning Outcomes

Level 1: Knowledge and Comprehension
Level 1 outcomes are those in which the student has been exposed to the terms and concepts at a basic level and can supply basic definitions. The material has been presented only at a superficial level. Upon successful completion of this course, students will be able to:

1a. Describe the unique characteristics and features of (Android) mobile applications.
1b. Define Android-specific programming concepts such as activities, intents, fragments, services, broadcast receivers, and content providers.
1c. Describe various user interface components of Android, including layouts, widgets, views, and menus along with the events associated with them.
1d. Describe both the benefits of multithreading on Android and the ways to implement multithreading in Android applications.
1e. Explain how to detect and respond to various touch gestures.
1f. Articulate the communication and network programming features and capabilities of Android platforms.
1g. Describe sensors—motion sensors, environmental sensors, and positional sensors—most commonly embedded in Android devices along with their application programming interfaces.
1h. Explain the structures of Android projects, including manifest, source code, and various resources such as assets, drawables, layouts, menus, and values.

Level 2: Application and Analysis
Level 2 outcomes are those in which the student can apply the material in familiar situations, e.g., can work a problem of familiar structure with minor changes in the details. Upon successful completion of this course, students will be able to:

2a. Differentiate techniques for persisting user data, such as shared preferences, traditional file systems (internal and external storage), and SQLite database.
2b. Design and create the user interface of a moderate-sized application using various views, widgets, menus, 2-D graphics, animations, and multimedia.
2c. Create a small-sized application that utilizes Android communication/networking capabilities—phones, SMS messages, emails, HTTP, XML/JSON web services, TCP/IP Sockets, and Bluetooth sockets—to communicate with the outside world.
2d. Create a small-sized application that utilizes embedded sensors such as accelerometers, gyroscopes, cameras, and GPS, e.g., a simple location-based service (LBS) application using Google Maps to obtain, monitor, and track geographical locations.

Level 3: Synthesis and Evaluation
Level 3 outcomes are those in which the students can apply the material in new situations. This is the highest level of mastery. Upon successful completion of this course, students will be able to:

3a. Develop an Android application of moderate size that utilizes various features of Android platforms, such as user interfaces, multithreading, data persistency, content providers, messaging and networking, embedded sensors, LBS, and background services.
3b. Express the design of a moderate-sized Android application using a standard modeling notation such as UML and evaluate its quality by relating to software engineering design principles such as cohesion and coupling, encapsulation, reusability, and maintainability.
