Project Assignment H: Prototype Version 2  
Human-Computer Interaction  
Due: 11/05/12

Do:

1. With one or more of your users as part of the design team, revise your design based on the results of (a) the other groups’ heuristic evaluations and (b) your cognitive walkthrough.

2. Create Version 2 of your prototype, based on your revised design. Regardless of the way this prototype is built, it should run without intervention from the developers. That is, a user should be able to make the interface work, even if the content does not actually depend on the user’s inputs. (Keep a runnable copy of Version 1!)

4. Create a link from your group’s Web page to your project report.

Turn in a report containing the following sections:

1. A presentation of how Version 2 differs from Version 1, with discussion of:
   a. How the revisions address problems identified in the heuristic evaluation and the cognitive walkthrough
   b. What the user(s) contributed to the design, and how you facilitated this contribution.

2. A statement signed by all members of the group that all members of the group contributed their fair share of the effort on the assignment.

Add the report to your project’s Web site.
