Spring 2009
Lab 3

Recursion and Backtracking
Due Monday, February 23, 2009

Lab 2 consisted of writing a program that used backtracking and a stack to find a solution to Starlit Sky. Now your task consists of writing a program that implements backtracking through recursion to solve the same problem. As before, use examples from www.janko.at/Raetsel/Sternenhimmel/index.htm to test your program.
