Solution to Problem 19

Task. As described in the corresponding lecture, every grammar obtained from a finite automaton is LL(1). For the grammar from Homework 8, build the corresponding table.

Solution. This grammar has three variables S, C, and E, three terminal, symbols 0, 1, and a, and the following rules:

- 1. $S \to aC$
- $2.\ S\to 0E$
- 3. $S \rightarrow 1E$
- 4. $C \rightarrow aC$
- 5. $C \rightarrow 0C$
- 6. $C \rightarrow 1C$
- 7. $E \rightarrow aE$
- 8. $E \rightarrow 0E$
- 9. $E \rightarrow 1E$
- 10. $C \to \varepsilon$

So, the corresponding table has the following form:

	0	1	a	eol
S	2	3	1	_
C	5	6	4	10
$\mid E \mid$	_	_	_	_
