Title: FEMhub Online Laboratory

Abstract:

The goal of the FEMhub Online Laboratory is to make scientific
computing accessible to anyone. No need to own a strong
computer or buy expensive software. Everything takes place
inside the web browser window, that turns into a virtual
computer desktop. The Online Lab is accessible from PCs,
laptops, netbooks, iPads, PDAs, and even web-enabled smart
phones. It is powered by computers of the hp-FEM group at the
University of Nevada, Reno, and users can install it on their
own servers as well.
