

Distribution of quadratic forms under closed skew normal settings

By

Xiaonan Zhu and Baokun Li

Advisor: Tonghui Wang

New Mexico State University and Southwest University of Finance and Economics

In this talk, quadratic forms of closed skew normal distributions and their properties are studied. Noncentral closed skew chi-square distributions are defined, which are generalizations of noncentral chi-square distributions and noncentral skew chi-square distributions. Some examples are provided for illustration of our results.
